Data-quality appendix

Calibration: applied — stats in pitch meters
Player tracks: 46 total (43 assigned to a team, 3 unknown)
Curation: 13 identified players; 12 track(s) excluded from all stats (9 marked by hand, 3 off-pitch)
Track fragmentation estimate: 2.1× the ~22 expected on-pitch people
  (well above 1× means IDs fragmented; team totals stand, per-player numbers are best-effort)
Ball detection rate: 34.0%

Every number in this report is reproducible from tracks.parquet + team_map.json
(+ calibration) without re-running tracking. See outputs/stats/ for the tidy CSV
with per-metric confidence flags.
